

STUART & GABRIELLA: WONDROUS WILDLIFE

Hil Stuart and Gabriella here. We're on a fun photo expedition. We're discovering lots of cool facts, too. Turns out that many animal groups have unusual names, like a shiver of sharks—and Gabby's favorite, a parliament of owls.

Some animals we've seen live in communities that cooperate to watch for predators and care for the young. Humans can be cooperative, too. We're meeting lots of people who work together to save wildlife. It's sad that thousands of animal species are threatened due to things like pollution, climate change, and hunting.

Learning about Earth's incredible creatures is a step toward helping them. Below, match each group with its description. Together, we can protect every pack, pod, and pride!

1 Zeal of Zebras

2 Thunder of Hippos

3 Conspiracy of Lemurs

4 Rookery of Penguins

5 Flamboyance of Flamingos

6 Parade of Elephants

A

These land animals band together in groups of females to raise their young. They drink about 60 gallons of water (227 L) a day!

These spirited animals live in small family groups. They have excellent hearing and eyesight. One stands watch at night, while the others sleep.

B

C

Males and females take turns warming and protecting their egg and foraging for fish and squid.

D

Living only on and around the island of Madagascar, mothers take turns with the babies, so they all get a chance to eat and socialize.

These animals dig in mudflats for food. They gather together for safety, sometimes in groups of a million!

E

F

These massive creatures are good swimmers that can fold their ears and nose shut and hold their breath for five minutes.
